The amount of carbohydrate you eat can make a big difference in your blood glucose. If you eat more carbs than you normally do at a meal, your blood glucose level is likely to be higher than usual several hours afterward. The chart at the bottom of this page shows the size of 1 serving for each food listed. One serving equals 15 grams of carbs.

### 14 A~~ A - DiabetesPro - American Diabetes Association

Carb Counting and Diabetes. Carbohydrates, or carbs, are naturally found in certain foods. For example, grains, sweets, starches, legumes and dairy all contain different amounts of carbs. Get up to speed on the three types of carbs, and what foods have them. When foods and drinks with carbs are digested, the carbs break down into glucose to fuel our cells, and the body's blood glucose, or blood sugar, level rises.
