Astrophotography is just another subgenre of photography. While you have probably heard of the more traditional photography genres like nature, landscape, street, portrait, macro, and many others, astrophotography is all about capturing images of the night sky.

Astrophotography For Beginners: A Complete A-Z Guide (2020)

Astrophotography is photography of astronomical objects, celestial events, and areas of the night sky. The first photograph of an astronomical object (the Moon) was taken in 1840, but it was not until the late 19th century that advances in technology allowed for detailed stellar photography. Besides being able to record the details of extended objects such as the Moon, Sun, and planets ...
