Spectroscopy is the study of the interaction between matter and electromagnetic radiation as a function of the wavelength or frequency of the radiation. Historically, spectroscopy originated as the study of the wavelength dependence of the absorption by gas phase matter of visible light dispersed by a prism. Matter waves and acoustic waves can also be considered forms of radiative energy, and ...

The presence of this force at the surface molecules will thus give rise to surface physicochemical analyses for many systems where surfaces are involved. The nearer the molecule is to the surface, the greater the magnitude of the force due to asymmetry. The region of asymmetry plays a very important role.
