Modeling uncertainties
in geographic

information science is
essential to the

development of the
field. This book

addresses one of the
fundamental

theoretical issues:

uncertainties in spatial
data and analysis.

Along with the latest
research findings, the

enables model validity to be assessed, as the model responses obtained in response to changes in model inputs can be compared with any a priori knowledge of system behavior. The individual input sensitivities obtained as part of SA are also useful, as they identify which inputs are most critical and should be the focus ...
