Per-Ingvar Brånemark (May 3, 1929 – December 20, 2014) was a Swedish physician and research professor, touted as the "father of modern dental implantology ". The Brånemark Osseointegration Center (BOC), named after its founder, was founded in 1989 in Gothenburg, Sweden.

Per-Ingvar Brånemark - Wikipedia

Now there is an alternative: The Brånemark System Zygoma Fixture. Due to extreme bone loss in the maxillary molar regions, patients would normally have needed bilateral posterior bone grafts. This treatment would have required additional surgery and prolonged treatment time. Dr. Higuchi, Diplomate of the American Board of Oral and Maxillofacial Surgery, states “The Zygoma fixture is a predictable source of implant anchorage for the posterior upper jaw which often minimizes or eliminates ...

Brånemark System Zygoma Fixture

The Brånemark System® consists of various implant forms. They are designated as the Standard, MK II, Conical Mk II, Mk III, Mk IV, and Special Fixtures. The implants are produced in lengths that vary from 7.0 mm to 18.0 mm depending on the implant form selected. The implant are produced in widths of 3.3 mm, 3.75 mm, 4.0 mm, 5.0 mm and 5.5 mm.

Implants | Brånemark System®

The Branemark Novum system is a one-day treatment of the edentulous or periodontally hopeless mandibular dentition. There are four drill templates and eight drill guides that precisely position three implants which are totally parallel and level. A prefabricated lower bar is placed on the three implants, and an upper bar fits on the lower bar.

The patients were randomly allotted for treatment by the Brånemark ® two-stage (submerged) system (BRS), or the ITI ® one-stage (non-submerged) system. In all, 102 Brånemark selftapping implants and 106 ITI hollow screw implants were installed and all patients were treated with full bridges. Biological and prosthodontic parameters, complications, success rates, clinical efficacy, patient satisfaction and resource requirements were evaluated.

The Brånemark System Zygoma implant typically pierces the oral mucosa in the premolar region and passes through the sinus along the lateral wall of the maxilla.

Brånemark System® Zygoma Procedures manual

The aim of this metanalysis was to investigate possible differences in failure patterns among four different osseointegrated oral implant systems. Only systems with a supposed scientific validation, based on long-term follow-up studies, were selected for this analysis, i.e. the Branemark system, the Calcitek Integral system, the Interpore IMZ system and the Straumann ITI system.

Brånemark system implants in the posterior maxilla: clinical study of 660implants followed for 5 to 12 years. Bahat O. Originally, osseointegrated implants were used principally in the anterior regionof the mandible and maxilla, but use in the posterior segments of both arches is common today. The long-term success of implants placed in the posterior region,an environment of stronger forces and poorer bone quality, has not beenthoroughly reviewed.

Brånemark system implants in the posterior maxilla ...

The scientific documentation of the implant system presents a great variation, and it is often difficult to compare studies of different systems. Purpose: The aim of this study was to compare two Swedish implant systems (Astra Tech and Brånemark System implants), in a prospective randomized study.

Astra Tech and Brånemark System implants: a prospective 5 ...

Studies of the Branemark System over the last 20 years have shown a 10% higher implant failure rate in soft maxillary bone in comparison to the dense bone of the mandible [4].

(PDF) Osseointegration in Dental Implants: A Literature Review

Long-Term Retrospective Clinical and Radiographic Follow-up of 205 Brånemark System Mk III TiUnite Implants Submitted to Either Immediate or Delayed Loading Implants with TiUnite surface demonstrated excellent long-term survival, marginal bone response, and soft tissue conditions, despite a nonoptimal level of oral hygiene.
