(the eff-bot guide to) The Standard Python Library [ home ] [ zone ] Based in part on over 3,000 newsgroup articles written by Python veteran Fredrik Lundh since 1995, this book provides brief descriptions and sample scripts for all standard modules in the Python 2.0 library.

### (the eff-bot guide to) The Standard Python Library

Using the subprocess Module¶. The recommended approach to invoking subprocesses is to use the `run()` function for all use cases it can handle. For more advanced use cases, the underlying Popen interface can be used directly.. The `run()` function was added in Python 3.5; if you need to retain compatibility with older versions, see the Older high-level API section.
